

Playbook — Agent Technical Spec

Generates the per-date plan from the couple's confirmed selections, folds in conduct & courtesy clauses, and hands off to the consent + face-verification flow. The LLM composes the document; it never performs the biometric check.

Naming: "playbook" / "plan" / "agreement of understanding" — never "contract" except in disclaimer text that states what the plan is *not* (e.g. "not a relationship or a contract"). The signed artifact is the **date plan**.

1 · Responsibilities & boundaries

Playbook agent (LLM) does	It does NOT do
Assemble the date-plan document from confirmed selections. Insert the right conduct/courtesy/liability clauses. Localise placeholders (fees, notice window, jurisdiction) from config. Produce plain, warm, non-legalese copy.	Perform or validate face verification / digital signature (that is the verification-API + app layer). Decide legal enforceability. Store the signed artifact. Invent fee/jurisdiction values — those come from config.

Hard boundary — biometrics are not an LLM job. The agent generates the plan and emits a `ready_for_signature` payload. The app then invokes the verification layer (DigiLocker/Persona/Onfido-class) to capture face + digital signature **per partner, independently**. The LLM never sees biometric data and never confirms identity — it only composes the document and the acknowledgement list.

2 · The consent + signature screen (in the app)

The screen makes three things visible before signing: **the selections each person chose** (greeting comfort, dietary, dress, bill split), **the courtesies expected** (via a Guru note), and **the key acknowledgements** — then a face-verified signature. Both partners sign independently; neither is bound until both do.

Selections that flow into the plan

- **Greeting / physical-boundary** — namaste · bow · handshake · side-hug · hug · cheek-kiss (from design principles). Both see and agree.
- **Dietary** — drives venue; shown for mutual awareness.
- **Dress style** — self-declared soft signal, shown as courtesy context.
- **Bill split** — 50/50 · alternate-treats · host-pays · pay-your-own.

Mockup in the DREAM design system — selections flow in, courtesies shown, then face-verified signature.

New — selections are binding-for-this-date once signed. The greeting/dietary/dress/bill selections aren't just profile data — they're written into the signed plan so both people have explicitly seen and consented to them. This makes the physical-boundary preference (e.g. "namaste, no hug") a mutual agreement, not a surprise at the table.

3 · The plan structure (12 sections, generated per date)

#	Section	Agent's job
1	Parties & Scope	Name both participants; state it's a single date instance, not a relationship/exclusivity/contract.
2	Date Details	Auto-fill date/time, meal type, venue/cuisine from the locked slot.
3	Payment & Fees	Payment opens post calendar+venue confirmation; per-date fee [config] or subscription; paid via platform.
4	Bill Split	Insert the selected method; binding for this date unless both change it beforehand.
5	Cancellation & No-Show	Notice window [config], fee [config], repeat-offence → compliance rating.
6	Code of Conduct & Courtesies	Respect/anti-harassment + the expanded courtesies (see §4).
7	BGV & Compliance Rating	Reliance on sign-up BGV; post-date mutual rating; pattern-of-low-ratings consequences.
8	Safety	Meet in the confirmed public venue; share details with a trusted contact; in-app reporting.
9	Liability & Assumption of Risk	Platform facilitates intro/scheduling/payment; not a party to conduct on the date; participants assume ordinary risk.
10	Dispute Resolution	Support channel first; [arbitration/governing-law per config].
11	Data & Privacy	Only match/booking info shared; exact contact + home address NOT shared as part of the plan (see §5).
12	Term	Governs this single date only; expires on completion/cancellation; doesn't carry forward.

4 • Expanded Code of Conduct & Courtesies (your addition)

Section 6 keeps the legal-protective conduct rules and adds explicit social courtesies — both raising the civility bar and strengthening the platform's defensibility.

Conduct (indemnifying)

- Treat each other with respect; harassment, discrimination, or abusive behaviour is prohibited.
- No recording/photographing/sharing the date without the other's consent.
- Respect the stated greeting/physical-boundary preference; no unwanted physical contact.

Courtesies & gestures (the "table manners" layer)

- Arrive on time; message through the app if running late.
- Be present — phone away, genuine attention.
- Basic table courtesy and politeness to each other and to venue staff.
- Honour the agreed bill-split gracefully; no pressure or scene over payment.
- End the date respectfully regardless of romantic outcome.

Why courtesies belong in a signed plan: they set a civility expectation everyone agreed to (useful for a marriage-intent brand), and a documented, consented standard strengthens the platform's position if conduct is later reported. They are framed as shared etiquette, never as legal threats.

5 • Contact exchange — through the app, never forced (your addition)

The refinement: instead of prohibiting contact exchange outright, the plan states that Instagram / phone / LinkedIn are shared **through the app, when both feel ready** — mutual, consented, transparent, never put-on-the-spot at the table.

- **Clause language (Conduct/Privacy):** "Contact details (phone, Instagram, LinkedIn) are exchanged through the app's mutual-share feature when both choose to — not solicited in person, so no one feels pressured."
- **Mechanic:** an in-app "share contact" action requires *both* to opt in before anything is revealed — same mutual-consent pattern as lock-in.
- **Why:** protects the shy/cautious partner (especially women) from an awkward in-person ask, keeps exchange transparent and revocable, and reinforces the safety/comfort brand.

6 • I/O data contract

Input (from app layer)

```
{
  "date_instance_id": "d_991",
  "participants": [ { "id": "u_1", "display": "User A"}, { "id": "u_2", "display": "User B"} ],
  "slot": { "datetime": "2026-12-13T11:00", "meal": "coffee", "venue": "[locked]" },
  "selections": {
    "u_1": { "greeting": "namaste", "diet": "veg", "dress": "smart_casual" },
    "u_2": { "greeting": "handshake", "diet": "veg", "dress": "smart_casual" },
    "bill_split": "alternate_treats"
  },
  "config": {
    // NEVER invented by the LLM
    "per_date_fee": "[₹amount]", "cancel_notice_hrs": "[X]",
    "cancel_fee": "[₹%]", "jurisdiction": "[per ToS]"
  }
}
```

Output (to app layer)

```
{
  "plan_document": "rendered 12-section date plan (plain, warm copy)",
  "acknowledgements": [ "conduct_courtesies", "cancellation", "not_a_contract",
    "liability" ], // becomes the checkbox list
  "contact_exchange_clause": true,
  "ready_for_signature": true // app then triggers face-verify + e-sign
}
```

7 • Lifecycle

- Generated when a date slot is locked (post calendar + venue confirmation).
- Emits `ready_for_signature` → app runs face-verify + e-sign per partner independently.
- Plan is active for the single date instance; expires on completion/cancellation; never carries forward.
- At Relationship stage, the *relationship* playbook (a separate, richer agent artifact) supersedes this per-date plan.

8 • Starter system prompt

Tuning baseline. Pair with the §6 input as the user turn. Tone: warm, plain, adult — a clear agreement between two people, not legalese.

You generate the Dare to Dream DATE PLAN — a plain, warm, per-date agreement of understanding between two people, produced from their confirmed selections.

RULES

- Never use the word "contract" except to say what this is NOT (e.g. "this is not a relationship or a contract").
- Fill only from provided data and config. NEVER invent fees, notice windows, or jurisdiction — if a config value is missing, leave the [bracketed placeholder].
- Write the 12 sections in plain language. Fold each partner's selections (greeting/physical-boundary, dietary, dress, bill split) into the plan so both have explicitly seen and agreed to them.
- Include the Code of Conduct AND the courtesies (punctuality, presence, basic table manners, graceful bill handling, respectful ending) as shared etiquette, never as legal threats.
- Include the contact-exchange clause: phone/Instagram/LinkedIn are shared through the app's mutual-share feature when both choose — never solicited in person.
- Respect the stated physical-boundary preference explicitly.
- You do NOT perform identity or face verification. End by emitting the acknowledgements list and `ready_for_signature`; the app handles signing.

Return the output JSON exactly. Keep copy warm and human, not legalese.

Agent 02 of 05 (REACH · Playbook · ROAD · Guru · Weekly Report). The LLM composes the plan and acknowledgements; the app + verification layer perform face capture and e-signature, per partner, independently. Fee/notice/jurisdiction values come from config, never the model. Grounded in the Sample Date Plan (12-section structure). Not legal advice — clauses need counsel review per jurisdiction (DPDP, and GDPR/local for expansion).
